Instructions for setting and operating the clock and timer:

OPERATION

Press MODE to switch between AUTO, which turns on the outlets according to the timer, and ALL ON, which powers on all the outlets, regardless of timer settings.

Tip: The only way of clearing the timers is to remove power from the clock, which means temporarily removing the battery from the bottom of the unit. You can experiment with setting the clock and timers by just using AC power to power the clock/timer circuitry. To do this, do not remove the plastic tab from the battery compartment until you are done experimenting, then turn off the power strip to clear the clock/timer memory. You can also do all your setups of the clock and timers then remove the plastic tab to keep your settings. This way, if you make a mistake in setting an extra timer you don't need, you can just turn off power with the power button and clear the clock/timer memory.

SET CLOCK
1. Press and hold the CLK/PROG button.

2. While holding down the CLK/PROG button, press the WEEK button to set the day of the week.

3. While holding down the CLK/PROG button, press the HOUR button to set the hour. You can hold down HOUR to move quickly through the hours. Make sure the am/pm is properly set.

   Note that each time you press the HOUR or MINUTE buttons the seconds value is reset to 00. So set the final hour or minute at exactly the right time to get the seconds set exactly correct.

4. While holding down the CLK/PROG button, press the MINUTE button to set the minute. You can hold down the MINUTE button to move quickly through the minutes.

5. Release CLK/PROG.

TIMER
Note that there are 10 sets of on/off timers available, each of which can use either or both banks of power outlets. You do not need to use them all.

1. Make sure the display is set to AUTO.

2. Press the CLK/TIMER button so that AUTO is flashing.

3. Press TIMER to get to one of the TIMER ON settings. The first will be 1 ON, the second press will get to 1 OFF, the third press will get to 2 ON, etc. You can use any of the ten timer numbers you want.
4. Once you have the timer ON number you want to use selected (e.g., 1 ON, 2 ON, 3 ON, etc.), press the WEEK button to cycle through the various days of the week on which you want this timer to start. You can select any one day of the week, Monday through Friday, Saturday and Sunday only, or all seven days of the week.

5. Press the HOUR button to set the starting hour. Make sure you pay attention to the am/pm display to get it set correctly.

6. Press the MINUTE button to set the starting minute.

7. Press the TIMER button to select the OFF setting for this timer number.

8. Press the WEEK button to set the ending day. You can have the timer turn off on any one day, every weekday, each weekend day, or each day. Note that you can have the timer on for more than 24 hours by selecting a different day than the ON timer setting.

9. Press the HOUR button to set the ending hour.

10. Press the MINUTE button to set the ending minute.

11. Press the MODE button to set which bank of outlets gets turned on and off with this timer setting. You can select TIMER 1, TIMER 2, or both TIMER 1 and TIMER 2.

12. At this point you can proceed to set another timer by pressing the TIMER button to select another numbered ON timer value, or you can return to normal operation by pressing the CLK/TIMER button.

Remember, for the timer(s) to operate, the AUTO mode must be selected (i.e., not ALL ON).
