## 2-Port DisplayPort 1.2 to DisplayPort Multi-Stream Transport (MST) Hub

P/N 21972

### Quick Start Guide

#### INTRODUCTION

This DisplayPort Multi-Stream Transport Hub allows you to distribute a single DisplayPort source to two DisplayPort displays. You can mirror a single video stream to both displays or configure your PC to output multiple video streams over the single DisplayPort output to increase your desktop area. It supports video resolutions up to 4K@60Hz for a single stream, which can be mirrored to both displays, or 4K@30Hz for two streams. It is fully compliant with the DisplayPort 1.2 specification and is backwards compatible with all previous specifications.

#### PACKAGE CONTENTS

- 1x 1x2 DisplayPort to DisplayPort Multi-Stream Transport Hub
- 1x Quick Start Guide

#### INSTALLATION

1. Ensure that all equipment to be connected is powered off and unplugged from its power source.
2. Using a DisplayPort 1.2 compatible cable, plug one end into the input on your display, then plug the other end into one of the outputs on the hub. Repeat for the other display.
3. Plug the hub into the DisplayPort output of your computer or other source device.
4. Plug in and power on all connected devices. Start video playback on your source device, then verify that you can see the video on both displays.
