

# INSTALLATION GUIDE

## Flat Panel Arm Mount

### MHA-1

Support 24" to 37" Screens

Max Load Capacity: 80 lbs (36 kg)

**VESA 200x200 compatible**

**Note:** Read entire instruction sheet before you start installation and assembly.

## **WARNING**

- Be sure to read this entire manual thoroughly and you fully understand all the instructions and warning before attempting to begin your installation.
- This product should only be installed by someone who has a basic knowledge of buiding construction,in stallations and fully understands these instructions.
- Make sure that the supporting surface will safely support the combined load of the mount, the display and all attached hardware and components.
- This wall bracket will only support flat panel displays(LCD,Plasma).The maximum load capacity is 80 pounds.
- If mounting to a wall of wood stud construction, be sure that mounting bolts are anchored to the center of the studs.
- Always have someone assist you to lift and position your equipment.
- Tighten screws and bolts firmly, but do not over tighten. Over tightening can damage the items and greatly reduce their ability to hold. Please refer to suggested torque values where applicable in these instructions.

### **Tools Needed for Assembly**

- stud finder ("edge to edge" stud finder is recommended)
- phillips screwdriver
- pencil
- drill
- 3/16"(4mm) drill bit for wood studs, 1/4"(6mm)( drill bit for concrete
- level
- tape measure

### **Table of Contents**

---

Parts List .....	3
Installation to Single Wood Stud Wall .....	4
Installation to Solid Concrete and Cinder Block .....	5
Attaching mount (AA) to Screen with VESA® Mounting Patterns .....	6,7
Cable Management .....	8

Before you begin, make sure all parts shown are included with your product.  
Parts may appear slightly different than illustrated.

## Parts List

	Description		
<b>A</b>	philips pan head screw	4	M4x0.7mmx10
<b>B</b>	philips pan head screw	4	M4x0.7mmx20
<b>C</b>	philips pan head screw	4	M5x15
<b>D</b>	philips pan head screw	4	M5x30
<b>E</b>	philips pan head screw	4	M6x1x12mm
<b>F</b>	philips pan head screw	4	M6x1x30mm
<b>G</b>	spacer	2	Ø12.7xØ6.0x12.7
<b>H</b>	concrete anchor / corss slotted head screw	2	M6x50 M6x60

**mount(AA)**

## Installation to Single Wood Stud Wall

### ⚠ WARNING

- Installer must verify that the supporting surface will safely support the combined load of the equipment and all attached hardware and components.
- Tighten wood screws so that wall plate is firmly attached, but do not overtighten. Overtightening can damage the screws, greatly reducing their holding power.
- Make sure that mounting screws are anchored into the center of the stud. The use of an "edge to edge" stud finder is highly recommended.
- Hardware provided is for attachment of mount through standard thickness drywall or plaster into wood studs. Installers are responsible to provide hardware for other types of mounting situations.

- A** Using a stud finder, locate and mark the edges of the wood stud. Use of an edge to edge stud finder is highly recommended. Use a level to draw a vertical line down the center of the stud. Use AA as template to mark center of holes along the vertical line. Drill three 1/8" (4 mm) dia. pilot holes 2" (50 mm) deep. Attach AA to wall using two M6 X 60 hexagonal screws ( H ) as shown in fig. A.2. Level plate, then tighten all fasteners.

## Installation to Solid Concrete or Cinder Block

### ⚠ WARNING

- When installing the wall mounts on cinder block, verify that you have a minimum of 1-3/8" of actual concrete thickness in the hole to be used for the concrete anchors. Do not drill into mortar joints! Be sure to mount in a solid part of the block, generally 1" minimum from the side of the block. Cinder block must meet ASTM C-90 specifications. It is suggested that a standard electric drill on slow setting is used to drill the hole instead of a hammer drill to avoid breaking out the back of the hole when entering a void or cavity.
- Concrete must be 2000 psi density minimum. Lighter density concrete may not hold concrete anchor.
- Make sure that the supporting surface will safely support the combined load of the equipment and all attached hardware and components.

- B** Use wall plate (AA) as template to mark mounting holes. Drill three 1/4" (6 mm) dia. holes 2" (70 mm) deep as shown in fig. B.1. Insert concrete anchor (H) in holes flush with wall as shown (right). Place wall plate over anchors and secure with M6x 60 cross slotted head screw (H). Level, then tighten all fasteners.

### ⚠ WARNING

- Tighten hex head bolts so that wall arm assembly is firmly attached, but do not overtighten. Overtightening can damage the screws, greatly reducing their holding power.

### ⚠ WARNING

- Always attach concrete anchors directly to load-bearing concrete.
- Never attach concrete anchors to concrete covered with plaster, drywall, or other finishing material. If mounting to concrete surfaces covered with a finishing surface is unavoidable, the finishing surface must be counterbored as shown below. Be sure concrete anchors do not pull away from concrete when tightening screws. If plaster/drywall is thicker than 5/8", custom fasteners must be supplied by installer.

fig. B.1

## Attaching AA to Screen with VESA® Mounting Pattern

**C** Choose hole pattern as shown in detail 3 for VESA mounting pattern. Begin with the shortest length screw, hand thread through adapter plate into screen as shown in detail 4. Screw must make at least three full turns into the mounting hole and fit snug into place. Do not over tighten. If screw cannot make three full turns into the screen, select a longer length screw from the fastener pack. Repeat for remaining mounting holes. Securely tighten screws.

**NOTE:** Spacers may not be used, depending upon the type of screen.

## For Flat Back Screen

### C.1

**OR**

Select the small, medium, large or extra large screws from the screw package. Fastener pack then attach screen brackets(AA) to screen following figure C.1.1 or C.1.2 on page 7.

### C.2

After the locked front plate is hanging on the wall panel, use a M4x12 philips pan head to fix these two parts.

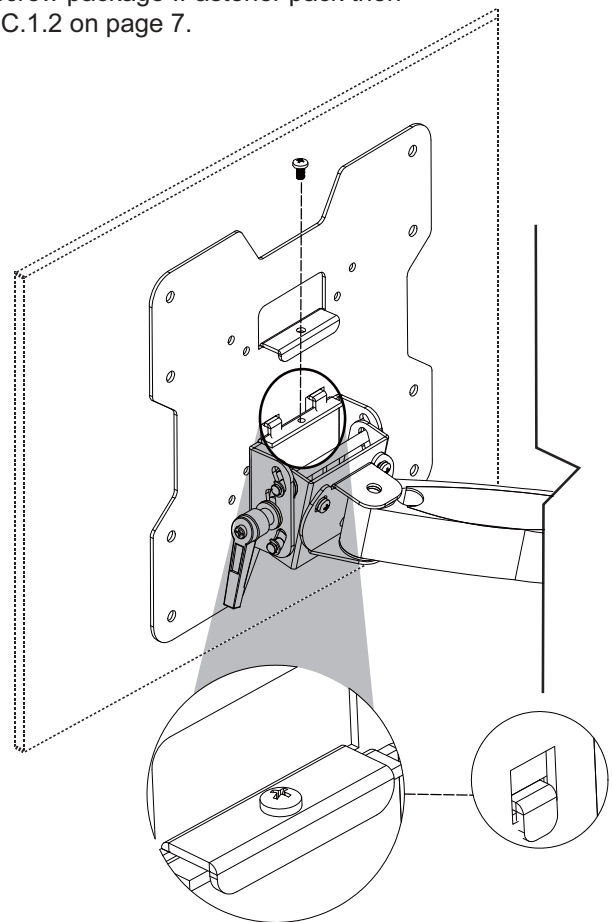

Be careful when you operate this bracket, or you may damage your screen.

#### **⚠ WARNING**

- Do not lift more weight than you can handle. Use additional man power or mechanical lifting equipment to safely handle placement of the screen.

#### **CAUTION**

- Do not tighten screws with excessive force. Overtightening can cause damage to mount.

**fig.C.2.1**

- D** Adjust tension knob on side of mount as shown in **fig. D.1** to desired tension to balance your screen size and weight.
- The tension knob, without changing the bracket tension, can be pulled out, away from the bracket and turned independently of the knob post for readjustment as shown in **fig.D.2**.
- Push or pull from top or bottom of screen to adjust tilt as shown. The tilt can be adjusted to a maximum of  $-5^{\circ}$  forward or  $+15^{\circ}$  backward

**⚠ CAUTION**

- Be careful not to pinch fingers when opening and closing mount from the wall.

**fig. D.1**

**fig. D.2**

**E Cable Management**

**Note:** Make sure cords have enough slack to allow full movement of the arm. Route cords inside arm slots of wall arm assembly (**AA**) as shown in **fig.E.1**. For demonstration purposes, the wall has been omitted from the image.

**fig.E.1**

**⚠ WARNING**

- Do not remove or loosen screw while the mount is in use. Doing so may cause the screen to fall.
