

Monoprice™

75" Cable Trench System with One Exit Point

Modular In-Wall Cable Management for Professional AV and Network Installations

The **75-Inch Cable Trench System** is a fully modular in-wall cable concealment solution designed to deliver a clean, professional finish for AV rack rooms, control centers, and head-end installations. Engineered for flexibility and scalability, this innovative system offers complete customization to meet your specific project requirements—whether you need a 15-inch vertical run or a full 75-inch cable trench.

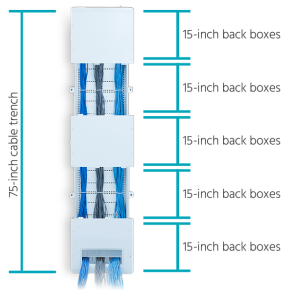

The Cable Trench System includes **(5) 15-inch back boxes, (1) pass-through end cap, (1) end cap with conduit and electrical knockout, (4) solid screw covers, and (1) brush cover**—providing a complete 75-inch system ready for installation. Each section connects seamlessly, allowing you to extend or shorten the total height as needed. With this modular design, you can tailor configurations to accommodate various service loop exit points or equipment rack heights—ideal for installations requiring precision and adaptability.

Perfect for **rack rooms, audio head-end spaces, and structured wiring environments**, the Cable Trench System keeps cables organized, protected, and completely concealed within the wall. The solid screw covers create a sleek, flush finish, while the brush cover offers a tidy exit point for cables—maintaining accessibility without compromising aesthetics. The end cap with integrated conduit and electrical knockouts simplifies power and data routing, supporting a wide range of professional AV and IT applications.

Each component in the system is constructed from high-quality, durable materials engineered for long-term performance and reliability. The modular back boxes are designed for easy alignment and installation, streamlining on-site setup. For added flexibility, **all individual parts are also available separately in convenient 5-packs**, enabling installers to design fully customized configurations beyond the standard 75-inch layout.

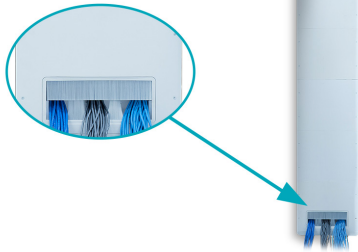

Whether you're running HDMI®, Cat6, fiber, or power cabling, the Cable Trench System delivers a professional-grade solution that simplifies maintenance, improves organization, and enhances the overall appearance of your installation. This system is especially useful when **multiple service loop exit heights** are required or when routing cables discreetly between in-wall entry points and equipment racks.

- **Complete 75" Modular System:** Includes (5) 15-inch back boxes, (1) pass-through end cap, (1) end cap with conduit and electrical knockout, (4) solid screw covers, and (1) brush cover for a fully assembled 75-inch setup
- **Fully Customizable Design:** Modular components allow you to build a cable trench between 15" and 75" tall to fit your specific installation requirements
- **Professional In-Wall Cable Management:** Perfect for rack rooms, audio head-end spaces, and structured cabling installations where clean, concealed wiring is essential
- **Flexible Cable Exit Options:** Use the included brush cover and end caps to create multiple service loop exit heights from the wall to your rack or equipment
- **Seamless Integration:** Back boxes connect securely for a continuous, sturdy in-wall pathway while maintaining a clean, low-profile appearance
- **Easy Access & Maintenance:** Solid screw covers provide a finished look while allowing for easy removal when servicing or adding cables
- **Conduit & Electrical Knockouts:** The end cap with built-in knockouts simplifies power and data cable routing for versatile AV and network configurations
- **Expandable System:** All components are also available separately in convenient 5-packs, enabling even greater flexibility for custom build applications
- **Durable Construction:** Built from robust materials engineered to withstand demanding installation environments and long-term use

MODULAR 75-INCH CONFIGURATION

The Cable Trench System includes (5) 15-inch back boxes that interlock to create a complete 75-inch cable trench. Each section can be used individually or combined, giving installers complete flexibility to customize the height and layout based on specific project requirements.

FLEXIBLE CABLE EXIT OPTIONS

The included brush cover provides a clean exit point for cables while preventing dust and debris entry. Installers can choose precise cable exit heights to align perfectly with rack positions or equipment locations.

DURABLE, INSTALLER-FRIENDLY CONSTRUCTION

Engineered from high-quality materials to withstand demanding installation environments, each component is designed for quick alignment, secure fastening, and long-term reliability, reducing labor time and ensuring a professional finish.
